Introduction

As a passionate web developer with expertise in React, WordPress, Tailwind, Php, JavaScript and Next.js, I continuously explore new technologies and actively contribute to open-source projects. Through independent work on personal projects, I have cultivated the skills to tackle challenges and deliver exceptional results. Committed to ongoing learning, I eagerly seek opportunities to expand my skill set and advance my career in the technology industry.

Experience

Noptin 🔗

Part-Time Freelance Developer | Noptin | December 2022 – April 2023

Collaborated closely with the development team at Noptin, a simple lightweight WordPress newsletter plugin, as one of the main developers

- Led The implementation of key features and enhancements, contributing to the continuous improvement of Noptin's functionality and user experience.
- Contributed to the troubleshooting and resolution of technical issues, significantly reducing the plugin's bug count and enhancing its reliability.
- Played a vital role in streamlining the plugin's performance, optimizing its efficiency, and enhancing its overall stability.
- Worked closely with the team to identify and prioritize user requirements, resulting in the successful integration of customer-driven features.

During my tenure at Noptin, my dedication and contributions as a main developer had a significant impact on the company's success. By enhancing the plugin's functionality, improving its performance, and ensuring its stability, I played a crucial role in elevating the overall user experience.

Projects

Kalenda – events management plugin 🔗

Kalenda is a simple WordPress plugin crafted to simplify the process of organizing and managing events.

- Utilized PHP, CSS and JavaScript to develop the plugin's functionality within the WordPress environment.
- Streamlined the plugin's performance by optimizing code and implementing efficient database queries, resulting in faster load times and improved user experience.

Projest 🔗

Developed Projest a full-stack platform designed to empower users to showcase and share their GitHub projects.

- Leveraged Tailwind CSS, React, and Firebase to build robust and user-friendly functionalities.
- Gathered user feedback and continuously iterated on the platform, incorporating new features and enhancements based on user needs and preferences.

Aurora ComKit 🔗

Developed Aurora Comkit, a library of Ui components and design resources for developers and designers.

- Utilized HTML, Tailwind CSS, and JavaScript to build customizable components, templates, and tools for building beautiful, responsive websites and web apps.
- Implemented range of responsive design techniques to ensure optimal viewing experiences across various devices and screen sizes.
